## TO WHOM IT MAY CONCERN

27<sup>th</sup> August 2003

My small building company, Constructive Homes purchased the Buildercost software in July 1997. Additions, renovations and alterations are my speciality.

Since 1997 I have received numerous upgrades of the program. Each upgrade adds new features and functionality. I have been very satisfied and amazed with what this program can do for me.

From my first use of this program I was aware that it was designed by a builder for builders. I thoroughly understand why so many builders use and recommend this software.

From the initial quoting stage all the way through to the hand over of the building, this program provides the solution. Buildercost covers the entire process. For example, job estimates, client reports, job budgets, purchase orders, contract documents, bill of quantities and a host of other important documents can be produced with accuracy and ease.

At all times during construction this program keeps me informed regarding client accounts and budget/actual cost comparisons.

One of the most beneficial points of my dealings with Buildercost Systems is the support I have received from John Hurren. He is always available to talk me through any problems I may encounter (even if self inflicted!).

Finally, I highly recommend Buildercost Systems to anyone thinking of purchasing a building industry software package. You need look no further than their amazing Buildercost software.

Yours Faithfully,

Wayne Whyte
